The Children's Library

EXTRACTS FROM MONTHLY BULLETIN OF OHIO STATE LIBRARY.

BOOK BUYING FOR A SMALL CHILDREN'S ROOM.

CAROLINE BURNITE, DIRECTOR OF CHILDREN'S WORK, CLEVELAND PUBLIC LIBRARY.

1st. Set aside a definite proportion of the book fund for children's books, otherwise the demands of the adults for certain books will crowd out the needs of the children. This proportion should be, in ordinary circumstances, not more than one-fourth of the total fund, and probably not less than one-fifth.

2nd. Aim to have your books average sixty cents (\$.60) each (actual cost). This does not mean that no book costing more than \$1.00 list should be bought, but that care should be taken to buy inexpensive editions as often as possible, in order that a few well illustrated books may be bought.

3rd. A good guide for book selection and for inexpensive editions is "A Child's Library," by Prentice and Power, (Cleveland Normal School, price \$.25).

4th. Build up your children's collection from two sides, the school side and the cultural side. Keep a list of all school subjects on which you have no good material and study the new Pittsburg School Catalogue (price \$.50) for suggestions for books along the subject desired. As an aid in building up your library from the cultural side, use Miss Moore's list of "Books for a Children's Library" (Iowa Library Commission), Miss Hunt's "The Child's Own Library" (Brooklyn Public Library), and "Christmas Books for Children" (Cleveland Public Library).

5th. For the sake of discount, buy all the children's books for the year at one time, reserving a few dollars for emergency needs. By placing this order in the early spring there is ample time to get the books catalogued before the heavier work of the winter. If it is deemed better, the books may be placed on the shelves a few at a time. The need in a small library is apt to be too great to permit this, however.

6th. Buy no new fiction unless asked for by title, and do not buy a requested title until it is listed in the A. L. A. book list, The Carnegie Library Bulletin or the Cleveland Library Open Shelf.

7th. Buy a few beautiful editions of books which are acknowledged to be classic (such as the Wonder Book with the Crane illustrations), and if the book fund is very small, keep these for room use and use cheaper editions for circulation.

8th. Buy the Crane, Caldecott and Greenaway picture books and keep them for room use. Buy for circulation the inexpensive little readers given in the lists mentioned.

9th. Study the catalogues of second-hand dealers who offer new books at a special discount. Where titles desired can be bought this way the discount is larger than a book seller's. In buying this way the cost of transportation must be included, which may make the actual cost more instead of less than the usual price.

10th. Always specify editions and do not buy from publishers' lists which do not specify editions.

THE PICTURES IN THE CHILDREN'S ROOM.

SOPHIE M. COLLMAN, PUBLIC LIBRARY OF CINCINNATI.

Once the monastery fostered culture, once the renaissance reflected it from every wall; today the public library is pursuing the same ideal. Its hope rests in the children's room with the grandfather of the perfect man to be. That the shelves of this room are stored with the choicest honey of the hive is a fact so self-evident that it need not here be touched upon; but aside from this, the room itself should be an influence. It should breathe an atmosphere of taste and culture and, with its quietly tinted walls setting off a few well-chosen pictures, lead its occupant to love the beautiful, though it were only after the manner of the worthy Monsieur Jourdain, who had talked prose all his life "without knowing it." Circumstances, of course, control the position and the wall space of the children's room as they do other things in this world. The only thing to do is to rise to the occasion and make the difficulties serve your ends. A sunny room with the right light is not always at one's command, but a warm tint will transform a gloomy wall and the right picture will work wonders.

A few large pictures are all the average room requires. Too many spoil the effect, and where the question of expense becomes a factor, let it rather be one good picture than three poor, cheap reproductions. In choosing the pictures, care should be taken to avoid too popular or hackneyed subjects; leave Rosa Bonheur and Landseer, the Madonna of the Chair and the Colosseum with the Perry pictures where they can do good work, but place something less familiar upon your walls.

If the choice seems beyond the comprehension of your visitors make the subjects familiar by telling their story. For instance, suppose you have on your walls good photographs of the Duomo at Florence, of Donatello's St. George and Michelangelo's Sibyl. These three pictures lend themselves to stories that the youngest child can understand, and yet, he who knows their history holds the key to the renaissance and with it, to the mystery of art.

Architectural subjects, such as Gothic cathedrals, Greek temples or renaissance palaces, also offer unlimited possibilities, first for their beauty of line and mass, and then from the literary and historical side. The following groups are suggested as illustrating these points: Canterbury cathedral; King Arthur; photograph of the Innsbruck statue by Vischer; Field of the Cloth of Gold, plaster relief; St. George and the Dragon, by Raphael; Temple of the Winds, Athens; Head of the Lemnian Athena; Arch of Constantine, Rome; one of the reliefs from the Arch of Constantine, Il Penseroso, Michelangelo; Palazzo Vecchio, view of the Cortile; Giovanni Tornabuoni, by Ghirlandajo; Dancing cherubs, by Donatello, plaster relief; children playing the organ, plaster relief, by Luca della Robbia; The Little Princess, by Moreelse; Boy, by Pinturicchio; Daughter of Roberto Strozzi, by Titian.

At first sight a set of pictures like Sir Galahad, by Watts; The Lion of Lucerne, by Thorwaldsen; Joan of Arc, by Joy; or the children of the last group might attract more attention than the severer selections given, but in the end the others would do more towards the development of taste. The lighter subjects should only come into play where a gradual awakening alone is possible. This might be brought about by supplying the frames with removable backs, thus allowing the pictures to be changed at will without going to the expense of a new frame; or, by a system of traveling pictures, which would allow the libraries to interchange pictures and thus glean a wider field.

Landscape robbed of its color loses its chief charm, and although a sepia reproduction may be pleasing, it is better to eschew the landscape in photograph. There is, however, an excellent series of colored lithographs that lends itself charmingly to wall decoration. The drawing is good and broad in treatment, the color refined, the composition harmonious, and the price within the reach of all; an unframed picture, 100x70 centimetres, (if bought of Leubrie and Elkus, 18 East 14th Street, New York), costs \$2.50; if ordered from the German publishers, B. G. Teubner or R. Voigtlaender, both of Leipsic, the "Kunstlerischer Wandschmuck" of the former and the "Steinkunst" of the latter firm, are considerably cheaper, but will not be sent on approval as is done by the American agents. One or two of these pictures, perhaps a wheat field and a group of sunlit swans, used with a relief of Luca della Robbia's singing boys, make a most attractive decoration for the children's room.

Frames in all cases should be simple and not interfere with the picture. A good frame is felt, not seen. Flat mouldings in subdued colorings, dark oak or dull ebony, will usually suit both photographs and colored pictures.

The plaster reliefs mentioned in the lists can be procured of Caproni Brothers, 1914-1920 Washington Street, Boston, Mass. and vary in price according to size, the larger costing about \$10 or \$12. They com-

bine well with either photographs or colored pictures and embrace a good range of subjects.

The following firms furnish good photographic reproductions: D. Anderson, Via Salaria, Rome, Italian architecture, sculpture and paintings in various sizes, 16x20 platino prints being 7 lire; A. W. Elson & Co., 146 Oliver Street, Boston, enlargements of architecture, sculpture and painting, 27x36 to 36x46, \$5 to \$7.50; Franz Hanfstaengl, 114 Fifth Avenue, New York, paintings 7x10 to 26x35, 1 mark 50 pfennigs up; Soule Art Publishing Co., 190 Boylston Street, Boston, architecture and paintings, bromide enlargements, 60 cents up.

All the art treasures of the children's room, however, need not be on the walls for, tucked away in drawers to be produced at will, for work at home and in school, should be plenty of Perry and Cosmos prints and Detroit Publishing Company colored photographs. Nor should there be wanting studies of houses, animals and trees for the young artist to try his hand at copying.

Last of all, the shelves should hold as many picture books as possible, prominent among them those of Walter Crane, for he, who has so wisely studied his Parthenon frieze, will prove a gentle monitor and friend along the pleasant paths of art.

THREE ESSENTIALS IN THE EQUIPMENT OF THE CHILDREN'S LIBRARIAN.

ESTHER STRAUS, PUBLIC LIBRARY, OF CINCINNATI.

Special work with children is a necessary function in the management of a public library, whether or not there are funds for a trained children's librarian; whether or not it is possible to have a separate room for the work. Though the librarian in charge of the small library be the library factotum, the combined circulating department, reference librarian, children's worker, janitor and "man about the place" or be the head of a larger institution who must be depended upon to inspire, instruct and direct the duties of an adequate staff, preparation and study must be given to children's work if the library would merit its position as part of the educational system of the community.

The background of all professional work is the professional attitude toward it, the attitude that distinguishes the artist who labors toward an ideal from the reluctant drudge who works because necessity compels him. Add to this, sympathy for the child and an interest in him and we have the first essential in the equipment of the children's librarian, viz: the personality suited to take up the work.

The second essential is training, which comprises systematic study and experience. Systematic study can be done best under competent tutor-

ship such as that offered by the many library schools throughout the country or by the apprentice classes of the larger libraries, but where these are not possible much can be accomplished in independent study by following a carefully outlined course of reading. It is often possible for the librarian to arrange for valuable instruction and practical work with the nearest normal school; but where this is not feasible the beginner will find many elementary and readable books, the initiated, more advanced literature, it may be, on the shelves of her own library. In order to understand child nature the course should include psychology, child study, the history of education and the fundamental principles of teaching. Presupposing an acquaintance with the classics, a course in English, based upon rhetoric and composition, which will give the student a conception of correct style and some critical standards, is suggested as an aid to the selection of children's books. A knowledge of juvenile literature is acquired by a wide and thorough reading of children's books, and library methods in children's work may be studied through reports, bulletins and printed lists of well-known libraries, which are often to be had for the asking. At least one library periodical should be read: Public Libraries (\$1.00 per year), Library Work (50c per year), Library Journal (\$4.00 per year). The following lists are suggestive in planning a course of study: "Reading List for Children's Librarians," by M. F. Williams and B. M. Brown, Albany, New York State Library; "Lists of Suggested Reading for Library Work With Children," Iowa Summer Library School, 1902, Des Moines, Iowa, Iowa Library Commission, (free); "Report on Instruction in Library Administration in Normal Schools," Winona National Educational Association (10c).

The librarian in active service has the daily opportunity of broadening her training through actual experience in dealing with children, handling children's books and meeting other workers interested in children. It has been frequently said, and with truth, that this is the day of the child. The bright child, the stupid child, the indigent, the deficient, the youthful criminal and the child laborer are being studied, and the conditions for healthy growth and development improved. The librarian should acquaint herself with all these movements, take an interest in meetings where children's workers gather, affiliate herself with teachers' clubs, conventions and institutes, keep in touch with the work of the Ohio teachers' reading circle and similar institutions, and by attending library institutes and meetings where library problems are propounded and discussed, further her progress. Activity in these directions augurs success to both librarian and library.

The third essential to the equipment of the children's librarian is the possession of the necessary tools for the conduct of the work. A collection of books, pamphlets and clippings on children's literature and kindred subjects, on story telling, home libraries, school work, and

methods of working with children in the library, library and publishers' catalogues, graded lists and bibliographies on special subjects, samples of cardboard for bulletins and files of pictures, illustrations, etc., should make up the tool chest, and these should be so arranged that they may be readily consulted. Most of these may be procured without cost, and the labor involved will be amply repaid by the labor saved through the use of the collection.

THE STORY HOUR.

MARY ELY, ASSISTANT CHILDREN'S LIBRARY, DAYTON, OHIO.

When a public library was defined as "a collection of books for the people," with stress laid solely upon "books," the librarian's chief concern was the number of books circulated, but now that we have extended the emphasis to include the phrase "for the people," our problem has changed and assumed a twofold aspect. We are asking ourselves now, not how can we circulate the greatest number of books, but how can we reach the greatest number of people, and, reaching them, how can we give them the books which will in each individual case bring the greatest profit and pleasure.

Nowhere is the answering of these questions more important than in the work with children, and one of our greatest aids in answering them is the story hour. The story hour attacks our problem upon both sides; it brings children to us who otherwise would probably never come, and it helps us to guide their interests whithersoever we will.

There are few children who do not instinctively love to have stories told to them and a notice of a story hour at the library is really a most effective advertisement of the library. Some of the children who come to us most regularly are children who came first to attend our story hours.

Telling children stories is the very best way to interest them in the history which surrounds the stories or the literature which grows out of them, because it is the most natural way. The story hour in our libraries may be a recent institution, but the principle of it probably dates back to the time when the first man had read something and wanted the second man to read it, too. We all tell our friends parts of the stories or the most interesting facts of the books we wish them to read. That the story hour does create the desired interest is proved by the demands made as soon as the story hour is over for books containing the stories told. And the best of it is that it does not end there. A child who has been drawn away from his stories of poor lads who have made marvelous fortunes, and interested in Norse mythology will, in nine cases out of ten, never settle down to reading nothing but fiction again. Many children are delightfully sur-

prised to find that the books which are not "just stories" are as interesting as those which are.

One of the greatest blessings of the story hour is the change that it works in the children's attitude toward the librarian and the library. The library is no longer simply a place where they go for books, get the books and leave as quickly as possible. They feel that they know the librarian who tells them stories, and they like to talk over their reading with her and ask her advice about what are good books to read. When we are dealing with children we are dealing with tastes as yet unformed, and if we can succeed in imparting a taste for the best books to the children who come to us, we have given them a guide which will never fail them.

But be the story hour ever so desirable, those of us who are always busy feel that we have very little time for story-telling, and often even less ability. Where it doesn't seem possible to have a regular time set for the story-telling, much may be done with impromptu story hours. One librarian told me that some of her most successful story hours had been of that kind. She always had a story ready to tell, and whenever she could spare a few moments she gathered the children, who chanced to be in the room, around a table and told it to them.

Here in Dayton we have managed to have frequent story hours by calling in our friends to help us. Many of our city teachers and the mothers of some of our children have volunteered to tell stories at the library, and have done it very successfully. Usually they come to us for suggestions as to what to tell, so that the choice of stories still lies in our hands, and the interest displayed in our work by the teachers and parents has increased tenfold since they have thus been allowed to share in it. All of which proves that even if we haven't time to tell the stories ourselves we need not entirely give up the story hour.

And most of us have more ability for story-telling than we think we have when we are thinking how very poorly we do it. Fortunately, the children are not so critical of us as we are of ourselves.

My first experience in library work was in conducting a story hour, and I entered into it with fear and trembling. I had a wild impulse to throw myself upon the mercy of my audience, confess to them that I didn't know how to tell stories and beg them not to say anything to anyone about it. But I started on my story and soon drew courage from the fact that the children seemed interested. And when I was through I heard—yes, they actually were saying: "Tell it again." Oh the joy of it! It didn't even spoil my triumph when I discovered that one little girl had fallen sound asleep, and having pillowed her hot little face on her gaily trimmed hat came forth at the end of the story with a painted visage that would have put an Indian warrior to shame.

The story hour means so much to the children, the story-teller, the librarian and the library that it surely deserves a trial from all of us. And once tried it will be continued. I speak from experience.

ARRANGEMENT OF CHILDREN'S BOOKS.

MARIA E. COMINGS, LIBRARIAN M'CLYMONDS PUBLIC LIBRARY, MASSILLON, O.

Suitable shelving is necessary to supplement intelligent classification if one would have an effectual arrangement of children's books. In most small libraries of today the Dewey system of classification, more or less modified, is in use. The problem of arrangement is to bring the best books of all classes to the notice of the children who need them. Convenience in handling the books must be considered, as must also the exigencies of the room, stack or corner devoted to children's books.

The stacks in many libraries have the six or seven shelves in the children's room which are necessary and convenient only in the adult room. Four shelves give the best service. The upper shelves may be cut off by a wooden flap, hinged at the top and covered with burlap to make a background for bulletins and pictures. But if one must choose between two evils, it is always better to have high stacks in a good light, than low stacks in semi-darkness.

In one tier at least, the shelves must be adjustable, so as to have deep shelves for the books for tiny children, as many of these are apt to be over-size. All the books of extra size in the regular collection may be kept together in special shelves also. If these books are kept near the books for the little children, their similar size and appearance will be an easy introduction for them to the children outgrowing the "baby" books.

A rack should be reserved for books in use in connection with the bulletin, and if this is cunningly placed it may be used as a bait to lure wanderers to a corner otherwise ignored. But do not separate it from the bulletin, or both will fail of half their mission.

A useful device, and one helpful to children and librarian alike, is a shelf devoted to "Best books for boys" and another, "Best books for girls." Only books of real merit should be tolerated in this select company, and they should be taken from all classes and changed often.

The non-fiction should run around the room on the two upper shelves, and the fiction on the two lower. The strategic importance of this arrangement is obvious. It suggests unexplored interests to the aimless child, distributes the story-snatchers, and forces good books upon the attention in a manner so ingratiating that the most hardened cannot resist or resent. If the continuity of shelves is broken by projections in the wall or by several windows the spaces thus isolated may be turned to advantage by placing there the special shelves. If, however, the parallel shelving of fiction and non-fiction is really impossible, do not make the mistake of putting the non-fiction off in a corner and the fiction on the shelves nearest the door. Give that advantage to the former.

Even the simplest arrangement cannot do all it should without the liberal application of labels. Labels should call attention to the better authors and to definite subjects; not, for instance, "Fine Arts," but "Music," "Drawing," "Games." Such labels, and the arrangement suggested, will do much to disperse the confusion that is apt to settle about the child turned loose to browse.

REFERENCE WORK WITH CHILDREN.

BY ESTHER STRAUS, HEAD OF CHILDREN'S DEPARTMENT OF THE PUBLIC
LIBRARY OF CINCINNATI.

After the obstructions have been removed and the road is well worn, the traveler who knows his destination will find the sign-post sufficient direction, but when the road is strange and impediments check progress, in most cases, the journey must be personally conducted. The reference librarian who uses the sign-post method in directing children along the road to information, if she is observant, will find that many turn back disheartened, because, unaided, they cannot conquer the obstacles in the path before them.

The first obstacle to be conquered by the child is the technique of reading, and though little reference work is done with children below the grammar grades, many who come for answers to questions stumble over comparatively simple words, or worse, combine letters and sounds and call off words, mentally or vocally that connote neither thought nor ideas. The immediate need is to answer the child's question, and if the answer cannot be found in print simple enough for the child's comprehension it is better to give the information verbally than to have the child groping aimlessly through the pages of a book. Nor must the child be sent away with the feeling of his own incompetency or believing that the librarian is "easy," but with the satisfaction of a duty performed and—a book under his arm. The book need not be an answer to his query, but it will be read if it is on any subject interesting to him and the contents simple. We must make a reader of the child. Interest in a book is the greatest incentive to reading.

Many a youthful Icarus soars too high and seeks information which he is not prepared to receive. "What is the atomic theory?" is asked by a girl who does not know the definition of the word atom. "Resolved that Washington did more for the United States than Napoleon did for France" is debated upon by boys who have never read French history. In similar instances the basic facts must be first given before references on the questions asked and the librarian for the time being turns teacher. Not merely must the source of knowledge be revealed, but, in a measure, the knowl-

edge itself must be imparted, keeping in mind, of course, that the primary duty is to teach the use of books. The librarian, if wont to listen to the idle prattle of young readers will often chance to hear herself called the "library teacher," and proud she may be if she is deserving of the title. An intuitive appreciation of the capacity of the child mind, sympathy with interest in the child's endeavor and the willingness and ability to give assistance where it is needed are the attributes of this "library teacher;" critical disdain and cynical asperity, the symptoms of unfitness.

It must be expected that the child will find difficulty in gleaning specific facts from an article that generalizes; for reason and judgment are faculties of the matured mind, and even the adult who becomes impatient at such trials is not unknown to the librarian. If the child is made to understand that it is no more necessary to read every word of an article on the Civil War to find a description of the battle of Bull Run than it is necessary to begin in the dictionary with the letter "A" and thumb each intervening page to find a definition of the word "history," an intelligent reader may be developed. Sometimes the difficulty lies in selecting the salient thought of a paragraph. A glance at the notes taken by the student will often reveal mere transcriptions of the original reference. Copying may serve to make the words of the author familiar and to give practice in writing, but both time and energy are wasted if the objects of the student's notes are to be ideas and thoughts. To help the child individual attention must be given him. He should not be told the important points of the paragraph, but be led by questions to ferret them out for himself.

The uses of the table of contents, the footnotes and the index of a book should be explained to groups of children, and it is often possible to do this in the schoolroom, using the textbook for the purpose. These lessons should be well planned and developed and may be made enjoyable and interesting to the pupil if accompanied by questions and quizzes. The teacher will frequently lend assistance, but the initial work for the most part comes from the librarian. The impulse to do research work generally originates with the teacher, but it is the librarian's privilege to equip the student with the ability to continue his studies and to make an independent reader of him by guiding him aright. He must not only become accustomed to using books, but also to the use of the library, so that he will know how to find the required book by means of the library finding lists, catalogs, etc., and how to work without confusion amidst a large collection of books. Just where the work of the teacher ends and the librarian's duty begins is hard to define. They must blend and dovetail.

If the librarian is to give a large share of her time and attention to guiding the young student an intimate working knowledge of the entire juvenile collection must be at command. There is only a limited number

of bibliographical aids to reference work with children. An "Index to Short Stories," by G. E. Salisbury and M. E. Beckwith (Chic. 1907, How.) will be of use in working with teachers and children. The range of subjects under which the stories are indexed is large and many of the books from which the stories are chosen will be found in the average children's collection. The "List of Books For Township Libraries" of the state of Wisconsin (Madison, 1902, Democrat Printing Co.) has a valuable subject index to the books recommended for purchase. "Biography for Young People," by B. E. Hyatt (Albany, 1901), University of the State of New York, analyzes many collective biographies. The public library of Cincinnati published in 1906 "An Index to American History and Biography for the Seventh and Eighth Grades," compiled by M. G. Blair, and many other valuable bibliographies are contained in the A. L. A. bulletin and in the publications of such libraries as the Cleveland Public and the Carnegie Library of Pittsburg. With few such exceptions the librarian must depend upon her knowledge of the child's book to provide answers to the inquiries of the child.

The bulk of reference work with children comes after school hours and it is no uncommon occurrence for the members of an entire class to come for the same subject. In such an event it is necessary to gather all the suitable material to supply the demand. The foresighted librarian will prepare for the rush by following the teacher's course of study or by getting advance notification from the teacher, so that the first comers will not empty the shelves of all good references and leave nothing for the stragglers.

A few books may be selected for permanent reference use, and in selecting the following list such books as the New International Cyclopaedia, Scientific American reference book and dictionaries, etc., of the adult collection, to which the older children should be referred are omitted. The list is especially designed for reference work with the grammar grades, and includes in the main books that should be found in every library.

General Works.

Champlin, J. D. comp. Young folks' cyclopaedia of common things.
Ed. 3. enl. Holt.

Champlin, J. D. comp. Young folks' cyclopaedia of literature and art.
Holt.

Champlin, J. D. comp. Young folks' cyclopaedia of natural history.
Holt.

Champlin, J. D. comp. Young folks' cyclopaedia of persons and places.
Holt.

Champlin, J. D. comp. and Bostwick, A. E. comp. Young folks' cyclopaedia of games and sports. Ed. 2. rev. Holt.

The volumes of these cyclopaedias are convenient in size, the language is simple, the information clear and concise and the illustrations plentiful. There are frequent cross-references from one article to others on allied subjects. They are stepping stones to the larger cyclopaedias.

Goss, Harriet and **Baker**, G. A. Index to St. Nicholas. Cleveland Cumulative Index Co.

Indexes the first twenty-seven volumes. The alphabetical arrangement of entries is convenient and the groups classified under subjects are helpful. Especially are the entries under Poetry, Amateur Theatricals, Amusements and Animals, useful.

Mythology.

Bulfinch, Thomas. The age of fable., ed., by J. L. Scott. Rev. ed., McKay.

Roman, Greek and northern mythology. For use with the older children.

Ellis, E. S. 1,000 mythological characters. Hinds.

The entries in this hand book are alphabetically arranged and the descriptions of the mythological characters are brief and simple.

Guerber, H. A. Myths of northern lands. A. B. C.

Guerber, H. A. Myths of Greece and Rome. A. B. C.

"Narrated with special reference to literature and art."

Nature Study.

Keeler, Mrs. H. L. Our native trees and how to identify them. Scribner.

An excellently illustrated book containing full descriptions of trees.

Parsons, Mrs. F. T. (S.) D. How to know the wild flowers. Scribner.

A guide to the identification of flowers with clear descriptions and good illustrations.

Wood, Theodore. Natural history for young people. Nister.

Text is clear and illustrations in black and white, and color are profuse. Well indexed.

Geography and Travel.

Herbertson, A. J., ed. Descriptive geographies from original sources. Black. (Macmillan.)

Comprehensive books which the older children will find useful.

McMurray, C. A. Type studies from the geography of the United States, first series. Macmillan.

Good descriptions of Hudson River, Ohio Valley, Pike's Peak, etc. cod fisheries, cotton and cotton plantations, gold mines, etc.

Rocheleau, W. F. Great American industries. 3 v. Flanagan.

Contents:

V. 1. Coal, petroleum, iron, marble, slate, etc.

V. 2. Products of the soil.

V. 3. Manufactures.

Scott Stamp and Coin Co. Scott's standard postage stamp catalogue. Ed. 61. Scott's Stamp and Coin Co.

This should be shelved near the geographies.

Starr, Frederick. Strange peoples. Heath.

Gives good accounts of Eskimos, Mexicans, Finns, Lapps, Turks, Chinese, Japanese, Arabs, etc. Suited to grades 5-7.

Tarr, R. S., and McMurry, F. M. Tarr and McMurry geographies, three book series. Macmillan.

A good general geography.

History.

Several good text books such as Eggleston's First Book in American History (A. B. C.) for the younger children, and for the older children Fiske's History of the United States for schools (Houghton) or McMaster's school history of the United States (A. B. C.) are necessary.

Gordy, W. F. American leaders and heroes. Scribner.

Contains biographical sketches of some of the most important characters in American history.

Gordy, W. F. Stories of American explorers. Scribner.

An historical reader giving vivid pictures of the lives of explorers. Suited to grades 5-6.

Holden, E. S. Our country's flag and the flags of foreign countries. Appleton.

Answers questions on signalling, national colors, etc., and gives the history of the American flag.

Government, Club Work, Etc.

Brookings, W. D., and Ringwalt, R. C., ed. Briefs for debate. Longman's.

The introduction is especially valuable as a manual on debating. Only the simplest debates should be chosen for the child.

Dole, C. F. American citizen. Heath.

Treats of citizenship, government, economic duties, social rights and duties and international duties, in an elementary way.

Hoxie, C. D. How the people rule. Silver.

A good book of civics for young people.

Robert, J. T. Robert's primer of parliamentary law for schools, colleges, clubs, fraternities, etc. Doubleday.

A useful and simple manual for the young club member.

Willard, C. D. City government for young people. Macmillan.

Designed as a text book for high schools, but also of value as a reference book for the grammar grades.

Literature.

Bryant, W. C., ed. New library of poetry and song. Baker.

One of the best single volume collections of poetry with good indexes by author, title and first lines.

Norton, C. E., ed. Heart of Oak books. Rev. ed., 7 v. Heath.

A series of school readers containing masterpieces of English literature. Because of the lack of an index it is necessary to study the contents thoroughly.

Scudder, H. E., comp. The children's book. Houghton.

An excellent one volume collection of the most famous stories in child literature.

Wiggin, Mrs. K. D., and Smith, N. A., ed. Golden Numbers. McClure.

A classified collection of poems. The interleaves and introduction add to the value of the book.

To meet the demand for material for the special days, the following books are suggested:

Baldwin, James, ed. Harper's school speaker. 3 v. Harper.

Contents:
